IRAZU

The symbol shows the real contour lines of the main crater of Irazú Volcano, Costa Rica, at 20 m intervals. The orange shape is the crater floor. The name is set in Instrument Serif with custom letter spacing and converted to outlines.

One colour and heavy version

Use one colour for screen printing, stamps and engraving. Use the heavy version for embroidery, laser engraving and small sizes: 3 of the 5 real contours, with a thicker stroke so thread or laser does not merge them.

> CMYK values are a direct conversion from RGB, without a colour profile. Pantone references are the closest matches by eye. Before a large print run, ask the printer for a proof or check against a physical Pantone guide.

Clear space and minimum size

Keep a clear space around the logo equal to the height of the letter I in IRAZU. No text, borders or other images inside that space.

Below the minimum sizes in the next table, the contours merge or disappear. If there is less space, use the heavy version or the IRAZU name alone.

Don’ts

- Do not stretch, rotate or change the proportions of the logo.
- Do not change the colours or make the contours orange in the primary version.
- Do not place the logo on busy photos without a plain background behind it.
- Do not add shadows, outlines, glows or 3D effects.
- Do not use the fine version below 60 mm or for embroidery.
- Do not retype IRAZU in another font: always use the kit files.
